PROJECTS

Front-End Web development

This is Front-End Development project is a fan website based on the show Made in Abyss. It's a project I created for my A-levels EPQ. The website is built using HTML and CSS and features a responsive design that adapts to multiple screen sizes. Overall, this project is my introduction to the area of web development, and it showcases my technical skills and demonstrates my creativity and technical abilities in front-end web development.

Personal Web Page |

IN 2023

My personal portfolio website created using React. The website contains interactive components that engage users and provide them with a seamless experience. I have incorporated animations, scrolling effects and interactive menus to provide a dynamic user experience. The webpage also features a responsive design for many devices such as iPhone and iPad.

Catalyst 2022 Hackathon

IN 2022

I participated in the 2022 Catalyst University Hackathon where I created a Galaga-based Star Wars theme game using Java. The game is also developed using Object-Oriented Programming principles which ensures that the code is modular, flexible, and easy to maintain. Our team also utilized Git for version control for easy collaboration and to keep track of changes allowing us to

EXPERIENCES

IT Equipment Installer at Metacom

FROM 2022

Going to offices and installing and setting up IT equipment such as computers, iMac, VoIP Phones and more
